Sessions

Configuration Profiles for Lion with the JSS

Ben Graham, JAMF Software

With the release of Apple's OS X Lion operating system came a new tool for the management of settings on your Lion computers. Configuration Profiles leverage many of the same frameworks and methods used in iOS mobile device management, applying them to your OS X clients. Using these same frameworks, JAMF Software has incorporated the ability to use Configuration Profiles to manage your OS X Lion computers from your JSS. In this session, we will explore how this new functionality can be implemented using your JSS, the benefits of Configuration Profiles over previous settings management tools, and explore some of the specific uses for Configuration Profiles.

Deployment Strategies for OS X Lion

John Miller, JAMF Software

The release of OS X Lion presents IT administrators with new options to deploy new machines and bring client machines up to date. In this session, we will consider the various deployment options and evaluate the pros and cons of each. We will also explore ways in which deployment of OS X Lion can be initiated by end users on demand using Self Service.

Integrating Adobe's IT Tools into Your Casper Suite Workflow

Jody Rodgers, Adobe

Deploying and administrating Adobe's desktop products is now much simpler than it used to be. This session will include direct guidance from Adobe on best practices and highlight a few undocumented processes, including removing older Creative Suite installations and determining the license state of an Adobe product. Additionally you will see how Adobe's IT tools such as the Adobe Application Manager Enterprise Edition (AAMEE) and the Adobe Provisioning Toolkit Enterprise Edition (APTEE) can be integrated into your existing Casper Suite workflow.

iOS Management: App Distribution

Ben Graham, JAMF Software

Since the release of the first iPhone, iOS devices have seen an ever-growing presence in enterprise organizations. As the number of iOS devices in an organization increases, IT needs the ability to ensure the necessary applications or "Apps" are available so that end users can accomplish their goals. In this session we will discuss the available tools for App distribution and examine common workflows that many organizations are using.

JAMF Nation Community Preview

Zach Halmstad, JAMF Software

In this session, we will share a preview of JAMF Software's new JAMF Nation community project. This new platform allows you to discuss ideas with members of your community, search for content related to your environment, and help JAMF Software prioritize our roadmap. We'll discuss some of the thoughts that went into development of the project and take a brief tour, ultimately concluding the session by encouraging you to sign up and participate in the community.

JAMF Software Developer Program

John Sutcliffe, JAMF Software

Learn about the benefits of becoming a member of the JAMF Software Developer Program and using the JSS API, Casper Suite SDK, Self Service, and the Resource Kit to integrate JAMF Software technologies into your existing environment. As a member of the JAMF Software Developer Program, you will receive early access to upcoming releases of the Casper Suite, priority access to support resources as you work with the JSS API and Casper Suite SDK, and much more. We will also share examples of how you can use the JSS API to facilitate connectivity between the Casper Suite and your in-house applications. Please join us to better understand how the JAMF Software Developer Program can benefit your organization.

Scaling the JAMF Software Server

John Miller, JAMF Software and **Guest Presenter**

As your use of the Casper Suite in your environment grows, the JSS can be scaled accordingly. In this session, we will discuss different scaling scenarios - from clustering to installing a web application in the DMZ. We will also cover topics such as scaling memory settings, pool sizes, and MySQL. Come prepared with questions about scaling the JSS in your own environment, or learn by listening to others discuss their experiences.
